Store FAQ & Catalog Notes

Frequently asked questions about how our catalog is organized, intended both fo browsing the store and for staff who need a quick reference.

Q: How is the catalog organized?

Every Track belongs to exactly one Album (except singles, which are modeled as a single-track Album), and every Album belongs to one Artist. Each Track is also tagged with a Genre and a MediaType, which is how the store distinguishes a physical CD track from a purely digital download of the same recording.

Q: What Genres does the store carry?

The catalog spans a wide range of Genres including Rock, Jazz, Classical, Metal, Alternative, Blues, and several others. Genre is used both for browsing the catalog and for the returns-policy exception on audiobook and spoken-word content described in the returns policy.

Store FAQ & Catalog Notes

Q: Can I buy a whole Album at once?

Yes. An Album can be purchased as a single bundled InvoiceLine, or a customer can purchase individual Tracks from that Album separately. Bundled Album purchases are usually priced lower per Track than buying every Track individually.

Q: How do Playlists work?

A Playlist is a curated ordered list of Tracks, which may span multiple Artists and Albums. Playlists are for browsing and discovery only — purchasing a Playlist is not supported; customers must still purchase the individual Tracks or Albums they want to keep.

Q: Who do I contact about a billing question?

Billing questions should reference the InvoiceId shown on the emailed receipt. Store support can look up the associated CustomerId and InvoiceDate to resolve most billing questions without needing any other information from the customer.
